

Guaranteed Stock for HVAC Installation Customer

CSE Eastleigh has been providing **stock support** to one of the UK's leading heating, ventilation and air conditioning companies in the UK, enabling them to call of a range of common components for immediate use.

With regular HVAC installations, they need to be certain of having the stock on site to complete jobs on time and to schedule, improving their customer's satisfaction and their profitability.

Having worked closely with the company for over 7 years, we are intimate with their ordering requirements and work closely for any shifts in their market place. In addition to standard stock required for all jobs, we are also sent regular updates for any upcoming install requirements.

An example of product currently held in stock for them includes:

CSE's southern branch was established in 1996 to serve industrial electrical customers along the coast. They constantly invest in manufacturer training such as ABB and Danfoss and in stock to provide customers with the level of service they can rely on.

Ray Hargreaves, CSE's Eastleigh Branch Manager said "we have worked closed with this HVAC business for a number of years and ensure that no job is held up by a problem with supply of their industrial electrical requirements."

This arrangement is not unique within CSE as we also provide a few other larger customers with various guaranteed stock holding arrangements to help their business cash flow and manufacturing / installation requirements.
