2/2-way assisted lift operated solenoid valve type EV251B 10-22

EV251B with assisted lift is especially suitable for applications such as closed systems with low and fluctuating pressure conditions or open systems with differential pressure down to 0 bar.

EV251B valves are supplied complete, including coil and plug.

Features and versions:

- For water, oil, compressed air and similar neutral media
- Flow range: 1.5 – 3.5 m³/h
- Differential pressure: 0 – 10 bar
- Media temperature from -10 – 90 °C
- Ambient temperature: Up to 80 °C
- Coil enclosure: IP65
- Thread connections: From G 3/8 – G 1
- DN 10 - 22
- Viscosity: Up to 50 cst
- Brass NBR version, NC

Function NC

Coil voltage disconnected (closed):

When the supply voltage to the coil (1) is disconnected, the valve plate (4) is pressed down against the pilot orifice (5) by the closing spring (3). The pressure across the diaphragm (6) is built up via the equalizing orifice (8). The diaphragm closes the main orifice (7) when the pressure above the diaphragm exceeds the inlet pressure below due to the larger diameter of the upper side and the compression of the closing spring (3). The valve will be closed for as long as the voltage to the coil is disconnected.

Coil voltage connected (open):

When the voltage is applied to the coil, the armature (2) and the valve plate (4) are lifted clear of the pilot orifice (5). If there is a differential pressure across the valve, the pressure across the diaphragm (6) drops because the pilot orifice is larger than the equalizing orifice. This causes the diaphragm to be lifted clear of the main orifice (7). If there is no differential pressure across the valve, the armature (2) draws the diaphragm (6) clear of the main orifice (7) using the assist spring (9.1) and assist connector (9.2). The valve will be open for as long as there is voltage to the coil.
